

Froggy Friday Fascinating Fact!!

A fingernail-size frog that can morph its skin texture from spiny to smooth in just minutes is the first shape-shifting amphibian ever found, according to a new report.

The tiny "mutable rain [frog](#)" (*Pristimantis mutabilis*) was discovered on the western slopes of Ecuador's Andes Mountains, in a protected cloud forest reserve. (Thank you to RZ for alerting us to this fascinating frog!)

Have a great weekend,
